

ULTRA-TUFF™ BONING TABLE

SAFARI
BELTING

Chemical Resistance

Withstands continuous exposure to PAA, other strong acids & bases.

Impact Resistance

Maintains high impact strength for exceptional performance and operational stability.

Abrasion Resistance

Withstands abrasion from both friction and wear which more than doubles belt service life.

**CUSTOMER DOCUMENTED
ANNUAL COST SAVINGS
\$30,000 PER APPLICATION**

COST SAVINGS DETAILS

PROBLEM

Large, bone-in product dropping onto one end of this long, wide application with frequent on/off transfers as the product was processed resulted in weekly module & rod repairs and quarterly belt replacement. Application caused frequent foreign material contamination concerns.

SOLUTION

Customer replaced Intralox S1800 (2.5" pitch) with Safari's Series 250 (2.5" pitch) ULTRA-TUFF™ belt.

RESULTS

Safari ULTRA-TUFF™ belt installed in January 2018. It was replaced in January 2020 as preventative maintenance. During the 2-year service life, no broken modules, no performance issues. **PROBLEM SOLVED!**
